Решение специфических задач через создание графического контента

Генерация контента под конкретные задачи

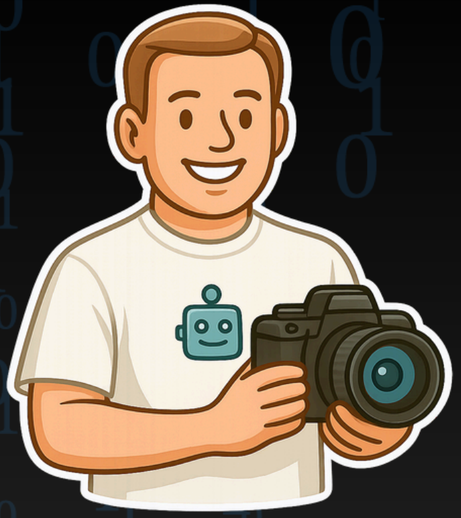

#3

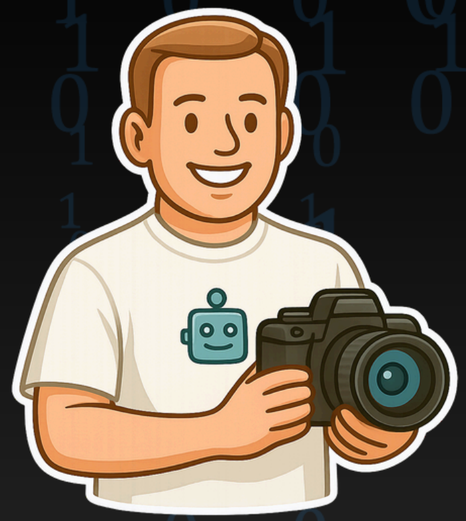

Что будем проходить на уроке?

Промты для генерации изображений

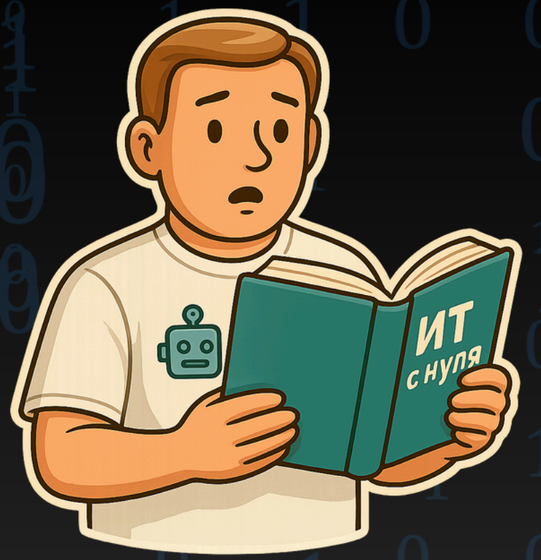

1. Объект (описание того, что создаем)
2. Сюжетная часть (что происходит)
3. Стилистика (какой стиль изображение)
4. Параметры (угол съемки, цветокор)
5. Меняй запрос

СТРУКТУРА ЗАПРОСА

JSON (JavaScript Object Notation) — это текстовый формат обмена данными, который позволяет хранить и передавать структурированные данные. Простыми словами, это способ записывать данные так, чтобы их могли читать и люди, и программы.

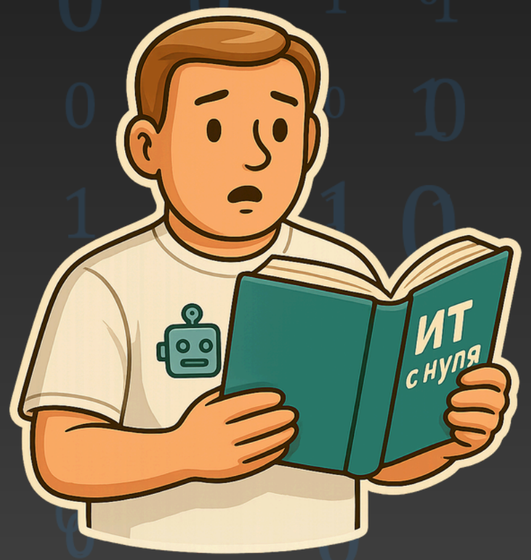

JSON-промты

Photorealistic advertising photo of a traditional Russian ushanka hat. The hat is new, premium quality, made of thick fur and high-quality fabric. The ushanka is the main hero object, centered in the frame, placed on or slightly above ice. Background is a vast icy landscape with glaciers, frozen textures, and clean arctic atmosphere. Cold daylight, bright natural light with soft reflections on ice. Strong contrast between cool blue and white ice tones and the warm brown fur of the hat. Premium, powerful, authentic Russian winter mood. Shallow depth of field, sharp focus on the hat, high detail, professional commercial photography, ultra-high quality.
